## CEAB

## CURRICULUM CONTENT ANALYSIS and

## DESIGN REQUIREMENTS

## CURRICULUM CONTENT: Accreditation Units (AU)

- One hour Lecture: .................. 1 AU
- One hour Lab/Tutorial: ........... 0.5 AU

Example:

| Course | Hours/Week |  | Average \# of weeks per semester |
| :---: | :---: | :---: | :---: |
|  | Lecture | Lab/Tutorial |  |
| ELE 504 Electronic Circuits II | 4 | 2 | 12.8 |
|  |  |  |  |

## CURRICULUM CONTENT: Content Categories

| Category | Example |
| :--- | :--- |
| Mathematics (M) | MTH140, MTH 240 ... |
| Basic Science (BS) | PCS 125, CHY 102, ... in part: MEC 511, ELE 401 ... |
| Complementary Studies (CS) | Liberal Studies, ECN 801 ... |
| Engineering Sciences (ES) | ???? |
| Engineering Design (ED) |  |

CEAB accreditation criteria states the minimum number of AUs in each category. For example, the criteria for ES and ED categories is:

$$
\begin{array}{rlr}
\mathrm{ES}+\mathrm{ED} & \geq 900 \mathrm{AU} & \text { and } \\
\mathrm{ES} & \geq 225 \mathrm{AU} & \text { and } \\
\mathrm{ED} & \geq 225 \mathrm{AU} &
\end{array}
$$

CEAB also states: "Any category that only exceeds its minimum number of AUs by $10 \%$ or less is considered marginal.

* Therefore, it is essential that the total AUs in each category is at least 20\% above the required minimum ( $10 \%$ to avoid the marginal status and $10 \%$ just in case).

## CURRICULUM CONTENT: Content Categories

| Mathematics (M) | Obvious ... |
| :--- | :--- |
| Basic Science (BS) | imparts an understanding of natural phenomena and <br> relationships through the use of analytical and/or <br> experimental techniques. |
| Engineering Sciences (ES) | - normally have their roots in mathematics and basic <br> sciences, <br> - carry knowledge further toward creative applications. <br> - may involve the development of mathematical or <br> numerical techniques, modelling, simulation and <br> experimental procedures. <br> - application to the identification and solution of practical <br> engineering problems is stressed. |
| Engineering Design (ED) | integrates M, BS, ES and CS in developing elements, <br> systems and processes to meet specific needs. It is <br> a creative, iterative and often open-ended process. |

## CURRICULUM CONTENT: ES and ED

- Electrical (ELE) and computer (COE) engineering courses are mostly ES and ED with some $M, B S$ and $C S$.
- Assignment of AUs to ES and ED categories varies greatly among courses and among similar engineering programs at different universities.

## Example:

Course: Digital Signal Processing

|  | AUs |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | ES | ED |
| University 1 | 42 | 21 | 21 |
|  |  | $50 \%$ | $50 \%$ |
| University 2 | 44 | 27 | 39 |
|  |  | $61 \%$ | $39 \%$ |
| University 3 | 48 | 25 | 23 |
|  |  | $52 \%$ | $48 \%$ |
| RU: ELE 792 | 51 | 31 | 20 |
|  |  | $60 \%$ | $40 \%$ |

TABLE 2C. 4 - ELECTIVE COURSES AND MINIMUM PATH

## PROGRAM: Electrical Engineering <br> OPTION: Regular

Average number of weeks per term of actual instruction for this program: 12.8
Proportionality Factor K = 51.2 AU/credit

| Course Number and Title | 2 | Hours |  | 5$A U=$ | Curriculum Components |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 3 | 4 |  | 6 | 7 | 8 | 9 | 10 | 11 |
|  | Academic Credit | Lecture | Lab/Tut | $\begin{aligned} & .5 \text { (lab/tut) } \\ & \text { or } \\ & K x \text { credits } \end{aligned}$ | Math | Basic Science | Comp. Studies | Eng'g Science | Eng'g Design | ES + ED |

Four of the following 8 courses are required (Specified Electives)

| ELE 734Design of ICs and <br> Semiconductor Devices | 1 | 38.4 | 25.6 | 51.2 |  |  |  | 36.6 | 14.6 | 51.2 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| ELE 735 Data Communications | 1 | 38.4 | 25.6 | 51.2 |  |  |  | 36.6 | 14.6 | 51.2 |
| ELE 744 Electronics and Instrumentation | 1 | 38.4 | 25.6 | 51.2 |  |  |  | 28.4 | 22.8 | 51.2 |
| ELE 745 Digital Communication Systems | 1 | 38.4 | 25.6 | 51.2 |  |  |  | 36.6 | 14.6 | 51.2 |
| ELE 746 Power System I | 1 | 38.4 | 25.6 | 51.2 |  |  |  | 36.6 | 14.6 | 51.2 |
| ELE 749 State-Space Control Systems | 1 | 38.4 | 25.6 | 51.2 |  |  |  | 36.6 | 14.6 | 51.2 |
| ELE 754 Power Electronics | 1 | 38.4 | 25.6 | 51.2 |  |  |  | 35.8 | 15.4 | 51.2 |
| ELE 792 Digital Signal Processing | 1 | 38.4 | 25.6 | 51.2 |  |  |  | 28.4 | 22.8 | 51.2 |
| SUB - TOTAL | 4 | 153.6 | 102.4 | 204.8 |  |  |  | 129.2 | 58.4 | 204.8 |

## CURRICULUM CONTENT: Engineering Design

- Most of the ED AUs are in the final year courses.
- Some $2^{\text {nd }}$ and $3^{\text {rd }}$ year courses also have ED components.
- Open ended problems / projects / lab work.
- ED component may result from:
o Lectures
o Assessment ( quizzes, exams, assignments )
o Project / Lab work
In determining the ED (or ES/BS/M) AUs, you should consider:
- What percentage of course hours (lecture, lab, project) is dedicated to ED as defined above?
- What percentage of total course assessment is based on ED work?
* For each course we (as a Department and as course co-ordinators) should be able to justify the AUs assigned to each category and back up this claim by samples of student work, copies of projects, assignments and exams.
